17 Defendants.

Case No. CV-08-1465-WHA

**MICROSOFT'S NOTICE OF  
MOTION AND MOTION FOR A  
MORE DEFINITE  
STATEMENT; MEMORANDUM  
OF POINTS AND  
AUTHORITIES**

Date: June 19, 2008  
Time: 8:00 a.m.  
Courtroom: 9, 19<sup>th</sup> floor  
Judge: William H. Alsup

**NOTICE OF MOTION AND MOTION<sup>1</sup>**

TO PLAINTIFF LAURIE MARIE LASKEY: NOTICE IS HEREBY GIVEN that on June 19, 2008 at 8:00 a.m. or as soon thereafter as the matter can be heard, in the Courtroom of the Honorable William H. Alsup of the United States District Court of the Northern District of California located at 450 Golden Gate Ave., 19th Floor, Courtroom 9, San Francisco, CA 94102, defendant Microsoft Corporation (“Microsoft”) will, and hereby does, move for a more definite statement pursuant to Federal Rule of Civil Procedure 12(e). Plaintiff’s Complaint is so unintelligible that Microsoft cannot reasonably be required to frame a responsive pleading.

Microsoft bases its motion for a more definite statement on this notice of motion and motion, the memorandum of points and authorities in support thereof, the pleadings on file with the Court, and on such other evidence as may be presented before or at the hearing on this motion.

---

<sup>1</sup> Microsoft originally filed this motion on March 24, 2008, and noticed it for hearing before Magistrate Judge Joseph Spero. On April 4, 2008, the action was reassigned to Judge Vaughn Walker and all hearing dates were vacated. Microsoft subsequently re-noticed the motion for hearing before Judge Walker on June 12, 2008. On May 5, 2008, the action was reassigned to Judge Alsup and the June 12 hearing date was vacated. Microsoft hereby re-notices this previously-filed motion for hearing before Judge Alsup.

**MEMORANDUM OF POINTS AND AUTHORITIES****I. INTRODUCTION**

Plaintiff's Complaint against Defendant Microsoft Corporation ("Microsoft") is filled with questions and sweeping statements utterly lacking even a basic level of factual detail, rendering the Complaint unintelligible. Plaintiff purportedly attempts to allege claims for negligence, intentional torts, premises liability, and products liability, but the scant facts alleged in support of these causes of action are nonsensical, confusing, and unclear. In fact, rather than affirmatively alleging facts in support of these causes of action, Plaintiff's Complaint is littered with questions, indicating that Plaintiff has no idea what she is alleging that Microsoft did wrong. The Complaint appears to state nothing more than the fact that "strange things appear on [Plaintiff's] computer." Microsoft is left without fair notice of the claims that Plaintiff makes and is unable to tell what Plaintiff believes Microsoft (as opposed to the other "Doe" defendants) did to cause her harm. Because Microsoft cannot formulate a coherent response to this Complaint without further clarification, the Court should grant Microsoft's motion for a more definite statement.

**II. BACKGROUND AND SUMMARY OF PLAINTIFF'S ALLEGATIONS**

Plaintiff Laurie Marie Laskey filed the Complaint in California state court on January 30, 2008. After Microsoft was served with the Complaint on February 15, 2008, Microsoft removed the case to this Court on March 17, 2008. Microsoft has not yet answered.

In the Complaint, Plaintiff asserts claims for negligence, various intentional torts, premises liability, and products liability using the Judicial Counsel of California's form complaint for Personal Injury, Property Damage, and Wrongful Death.<sup>2</sup> The Complaint further indicates that she seeks to hold Microsoft liable for "other" causes of action such as "Computer crimes, Identity Theft, FCC Invasions, Code Violations, Technical Violations, Split Tunneling, Security Breach, Invasion of privacy, stalking, etc." Complaint at 3, ¶ 10.

---

<sup>2</sup> A courtesy copy of the Complaint is attached hereto as Exhibit 1.

1 According to the Complaint, Plaintiff was “attached to a Virtual Private Network  
2 without my knowledge and hacked into.” *Id.* at 3, ¶ 15. She alleges that a “faulty system  
3 has created a security breach.” *Id.* For the causes of action labeled by Plaintiff as “other”  
4 (i.e., Computer crimes, Identity Theft, FCC Invasions, Code Violations, Technical  
5 Violations, Split Tunneling, Security Breach, Invasion of privacy, stalking, etc.), no further  
6 factual allegations are stated.

7 For the negligence, intentional tort, premises liability, and products liability claims,  
8 Plaintiff’s Complaint attaches Judicial Council Causes of Action forms for each claim. In  
9 support of her cause of action for general negligence, plaintiff states only that “[y]ou have a  
10 faulty system which created a security breach that allowed other [sic] to hack into my  
11 computer and caused me to lose my means of employment.” *Id.* at Cause of Action –  
12 General Negligence No. 2. She then presents the following questions: “A virtual server is  
13 being used? Is that a game server? or does it relate to a virtual private network?” *Id.*

14 Plaintiff pleads a second cause of action for general negligence, again stating simply  
15 that “[y]ou have a faulty system which created a security breach.” *Id.* at Cause of Action –  
16 General Negligence No. 1. Again, she offers merely questions in place of factual details,  
17 including the following:

18 was the Windows 95 print program ever upgraded? the hackers work in the  
19 background and the printer icon shows up in Windows 98 and the other  
20 current versions if it was never upgraded Microsofts employees would have  
21 knowledge of that. My printer does strange things and strange things appear  
22 on my computer(s).

21 *Id.*

22 Plaintiff further attempts to plead two causes of action for “Intentional Torts,” again  
23 stating only that “Microsoft maintained a faulty system.” *Id.* at Cause of Action –  
24 Intentional Tort Nos. 1 and 2. She claims that Microsoft’s servers “are not being  
25 maintained properly” and that Microsoft has therefore “created a premises liability issue”  
26 and “is supporting a crime ring.” *Id.* at No. 1. In support of her second intentional tort  
27

1 claim, she refers to warnings received in “DNS reports,” asking “[d]o they switch it back  
2 and forth whenever they want to hack?” *Id.* at No. 2.

3 For the cause of action for premises liability, plaintiff states that she was “connected  
4 to a faulty system and it created a fault” while she was at home on her computer. *Id.* at  
5 Cause of Action – Premises Liability. She specifies three counts of premises liability –  
6 negligence, willful failure to warn, and dangerous condition of public property. *Id.*

7 Finally, Plaintiff also brings a claim for products liability, stating that Microsoft’s  
8 “equipment, wiring, servers, routers, filters, computers, software, etc.” caused her injury,  
9 seeking to hold Microsoft strictly liable. *Id.* at Cause of Action – Products Liability.

10 Plaintiff seeks compensatory and punitive damages. *Id.* at 3 ¶ 14. She claims to  
11 have suffered damages for wage loss, loss of use of property, hospital and medical  
12 expenses, general damage, property damage, loss of earning capacity, along with other  
13 damages such as a lower credit score, expense of discovery, case related expenses,  
14 emotional distress, attorneys fees, and discrimination. *Id.* at 3 ¶ 11.

### 15 **III. ARGUMENT**

#### 16 **A. Legal Standard**

17 A Rule 12(e) motion for a more definite statement is proper “if a pleading to which a  
18 responsive pleading is permitted is so vague or ambiguous that a party cannot reasonably be  
19 required to frame a responsive pleading.” Fed. R. Civ. P 12(e). Courts may grant such  
20 motions when pleading is “so vague or ambiguous that the opposing party cannot respond,  
21 even with a simple denial, in good faith or without prejudice to himself.” *Cellars v. Pacific*  
22 *Coast Packaging, Inc.*, 189 F.R.D. 575, 578 (N.D. Cal. 1999).

23 The decision to grant a motion for a more definite statement is within the discretion  
24 of the trial court, based upon the particular facts alleged in each case. *Kuenzell v. United*  
25 *States*, 20 F.R.D. 96, 98 (N.D. Cal. 1957) (“Whether or not the motion should be granted or  
26 denied depends primarily on the facts of each individual case, and it is ultimately within the  
27 Court’s discretion to determine whether the information sought by the movant is necessary  
28 to enable him to prepare a responsive pleading”); *see also McHenry v. Renne*, 84 F.3d 1172,

1 1179 (9th Cir. 1996) (Even though a complaint is not required to designate which statute or  
2 other provision of law has been violated, a court may in its discretion, in response to motion  
3 for more definite statement under Rule 12(e), require such detail as may be appropriate in  
4 the particular case).

5 **B. Plaintiff's Complaint Is Unintelligible and Prevents Microsoft from**  
6 **Formulating a Responsive Pleading.**

7 Plaintiff's Complaint is so confusing and unintelligible that it prevents Microsoft  
8 from drafting its answer.

9 **1. To the extent that the Complaint alleges some wrongdoing by**  
10 **anyone, Microsoft is unable to ascertain whether Plaintiff is even**  
11 **alleging that Microsoft committed a wrong.**

12 From the Complaint, Microsoft is only able to ascertain that Plaintiff believes that  
13 somehow and somewhere Microsoft maintained a "faulty system." Complaint at 3 ¶ 15.  
14 Plaintiff makes exceedingly broad and sweeping generalizations in support of this claim,  
15 such as "Microsoft is supporting a crime ring," *Id.* at Cause of Action – Intentional Tort No.  
16 1, and "I was continually exposed to a harmfull [sic] environment and lost my means of  
17 employment because of it." *Id.* at Cause of Action – Intentional Tort No. 2.

18 It is impossible for Microsoft to answer these highly general allegations without at  
19 least some additional detail. For example, nowhere in the Complaint does Plaintiff identify  
20 specific products or services she was allegedly using. Moreover, Plaintiff completely fails  
21 to allege how those products or services are connected to Microsoft. She refers to  
22 "equipment, wiring, servers, routers, computers, software, etc.," but these types of products  
23 could literally implicate thousands of different products distributed by Microsoft or by other  
24 software or hardware manufacturers. Microsoft is left to guess whether Plaintiff was, for  
25 example, a user of the Microsoft Windows operating system, a user of Microsoft software  
26 such as Internet Explorer or Word, or a person accessing websites maintained by Microsoft.  
27 In fact, Microsoft is unable to tell for certain whether the Plaintiff even had any connection  
28 to Microsoft or its products whatsoever.

1 Much of the confusion created by the Complaint is due to the fact that the Plaintiff  
2 never specifies the parties who caused her alleged harms. In addition to Microsoft, Plaintiff  
3 has filed this action against 1000 “Doe” defendants, many of whom could be hackers she  
4 believes stole her personal information. However, many of the allegations Plaintiff makes  
5 appear to be directed at those defendants – but not Microsoft. The Complaint, however,  
6 makes no attempt to distinguish between Microsoft and the other defendants, instead  
7 referring generally to “they” and “them”. For example, in one place in the Complaint,  
8 Plaintiff asks the question: “A virtual server is being used?” *Id.* at Cause of Action-General  
9 Negligence No. 2. It is unclear whether Plaintiff is suggesting that hackers used a virtual  
10 server to access her data or whether she instead means that Microsoft somehow used or  
11 distributed a virtual server. Without some greater specification of the multitude of “theys”  
12 and “thems” in the Complaint, Microsoft cannot determine whether Plaintiff’s various  
13 allegations are directed to Microsoft or to someone else.

14 Many of the “facts” alleged in support of the specific causes of action only further  
15 confuse the matter. In her claim for premises liability, for example, Plaintiff has checked a  
16 box indicating that she is alleging a count for “Dangerous Condition of Public Property.”  
17 *Id.* at Cause of Action – Premises Liability. She indicates that the condition for which she  
18 is bringing suit was “created by employees of the defendant public entity.” Microsoft is not  
19 able to respond to this claim because it has no way of knowing whether Plaintiff is alleging  
20 that an unnamed Doe defendant that is also a public entity caused Plaintiff’s harm or  
21 whether Plaintiff mistakenly believes that Microsoft is a public entity.

22 This situation is precisely the kind of situation in which courts routinely grant  
23 motions for a more definite statement. In *Parker v. Brush Wellman, Inc.*, 377 F. Supp. 2d  
24 1290 (N.D. Ga. 2005), the plaintiff’s complaint referred only generally to a group of  
25 defendants, but failed to identify the role that each individual defendant’s products played  
26 in causing Plaintiff’s harm. The court granted a defendant’s motion for a more definite  
27 statement, finding that the absence of critical allegations as to *each* individual defendant  
28 rendered the Complaint defective, as defendants “are left without ‘fair notice’ of the factual

basis underlying the claims that they must now attempt to defend.” *Id.* at 1295. The court held that “the Federal Rules do not permit a party to aggregate allegations against several defendants in a single, unspecific statement, but instead require the pleader to identify (albeit generally) the conduct of each defendant giving rise to his claims.” *Id.* at 1294; *see also Van Dyke Ford, Inc. v. Ford Motor Co.*, 399 F. Supp. 277, 284 (E.D. Wi. 1975) (granting a motion for a more definite statement where complaint referred generally to “plaintiffs” and “defendants” but failed make specific references to wrongful actions by each individual plaintiff and defendant).

Microsoft is therefore entitled to a clear and concise statement in the Complaint about its own actions that allegedly caused Plaintiff’s harm. Plaintiff’s general allegations about wrongs committed by unspecified entities are insufficient.

**2. Plaintiff’s Complaint is filled with questions, rather than affirmative allegations of fact, demonstrating that Plaintiff does not know what she alleges.**

The Complaint is further unintelligible because rather than stating facts supporting the claims for relief, Plaintiff’s Complaint is instead filled with a multitude of questions. These questions indicate that Plaintiff herself is unsure of what she alleges in the Complaint and whom she is alleging caused her harm.

For example, in her description of one of the claims for general negligence, Plaintiff offers the following questions: “A virtual server is being used? Is that a game server? or does it relate to a virtual private network?.” Complaint at Cause of Action – General Negligence No. 2. In support of an intentional tort claim, plaintiff similarly poses another question: “do they switch it back and forth when they want to hack?” *Id.* at Cause of Action – Intentional Tort No. 2. Furthermore, attached to the Complaint are exhibits covered in handwritten questions such as the following:

Is this why the phone wiring on the side of my home was installed different than it should have been?

Is there a file open at the DA’s? FBI? CIA?

1 Does this have something todo [sic] with the time and time zones?

2 What did I cut off of the side of my house at the phone box?

3  
4 *Id.* at ex. page 36. The questions demonstrate that even the Plaintiff is unsure of what she is  
5 alleging *anyone* – much less Microsoft – did wrong. Without further clarification,  
6 Microsoft cannot formulate a coherent response to these claims, as it cannot even ascertain  
7 what Plaintiff alleges Microsoft did wrong.

8 **3. Plaintiff has not stated facts demonstrating any causal connection**  
9 **between Microsoft's actions and the damages Plaintiff allegedly**  
10 **suffered.**

11 The damages allegations in the Complaint are likewise flawed and unintelligible.  
12 Plaintiff states, for example, that she is entitled to compensatory damages for hospital and  
13 medical expenses. *Id.* at 3 ¶ 11. The Complaint, however, fails to allege even a single fact  
14 suggesting that Plaintiff may have suffered any injury requiring medical attention. The  
15 facts that Plaintiff has pled suggest only that hackers *remotely* accessed her computer.  
16 Microsoft is again simply left to guess how Plaintiff could have possibly sustained bodily  
17 harm on these facts.

18 Plaintiff's allegations that she suffered other damages such as wage loss or  
19 discrimination, *id.*, are similarly perplexing. The Complaint contains no facts explaining  
20 any causal link between the actions (or inactions) of Microsoft and Plaintiff's alleged loss  
21 of employment or discrimination she suffered. Microsoft cannot possible admit or deny  
22 these allegations without more information from the Plaintiff about the supposed factual  
23 connection.

**IV. CONCLUSION**

For the reasons set forth above, the Court should grant Microsoft's motion for a more definite statement. Fed. R. Civ. P. 12(e).

Dated: May 6, 2008

## 156 Part II: Making Windows 95 Do Something

### Leaving Scraps on the Desktop Deliberately

The Clipboard is a handy way to copy information from one place to another, but it has a major limitation: Every time you copy something new to the Clipboard, it replaces what was copied there before. What if you want to copy a *bunch* of things from a document?

If you were cutting and pasting over a real desktop, you could leave little scraps lying everywhere, ready for later use. The same *scraps* concept works with Windows 95: You can move information from window to window, using the desktop as a temporary storage area for your scraps of information.

For example, suppose that you have some paragraphs in a WordPad document you want to copy to some other places. Highlight the first paragraph, drag it out of the WordPad window, and drop it onto the desktop. Poof! A small Scrap icon appears on your desktop. See another interesting paragraph? Drag it onto the desktop, as well: Another Scrap icon appears.

Eventually, you'll have copies of your report's best paragraphs sitting in little scraps on your desktop. To move any of the scraps into another document, just drag them into that other document's window and let go.

Any remaining, unused scraps can be dumped into the Recycling Bin, or simply left on the desktop, adding a nice, comfortable layer of clutter.

To make a scrap, highlight the information you want to move, usually by running the mouse pointer over it while holding down the mouse button. Then, point at the highlighted information and, while holding down the mouse button, point at the Desktop. Let go of the mouse button, and a scrap containing that information appears on the Desktop.

**Note:** Not all Windows 95 applications support Scraps. In fact, WordPad is the only program in the Windows 95 box that can use Scraps.

### Controlling the Printer

\*

Many of the Windows 95 features work in the background. You know that they're there *only* when something is wrong and weird messages start flying around. The Windows 95 print program is one of those programs.

When you choose the Print command in a program, you may see the little Windows 95 printer icon appear at the bottom corner of your screen. When your printer stops spitting out pages, the little printer icon disappears.

Controlling Someones computer via the printer?  
The hackers work in the background.  
The printer icon shows up in window.  
The printer icon is the windows 95 feature ever

## DNSreport for msft.net

Generated by [www.DNSreport.com](http://www.DNSreport.com) at 17:29:11 GMT on 20 Jan 2008.

 [Email link to](#)

Category	Status	Test Name	Information
	PASS	Missing Direct Parent check	OK. Your direct parent zone exists, which is good. Some domains (usually third or fourth level domains, such as example.co.us) do not have a direct parent zone ('co.us' in this example), which is legal but can cause confusion.
	INFO	NS records at parent servers	<p>Your NS records at the parent servers are:</p> <p>ns1.msft.net. [207.68.160.190] [TTL=172800] [US]  ns2.msft.net. [65.54.240.126] [TTL=172800] [US]  ns3.msft.net. [213.199.161.77] [TTL=172800] [GB]  ns4.msft.net. [207.46.66.126] [TTL=172800] [US]  ns5.msft.net. [65.55.238.126] [TTL=172800] [US]</p> <p>[These were obtained from a.gtld-servers.net]</p>

Parent	PASS	Parent nameservers have your nameservers listed	OK. When someone uses DNS to look up your domain, the first step (if doesn't already know about your domain) is to go to the parent server. If you aren't listed there, you can't be found. But you are listed there.
	PASS	Glue at parent nameservers	OK. The parent servers have glue for your nameservers. That means they send out the IP address of your nameservers, as well as their hostnames.
	PASS	DNS servers have A records	OK. All your DNS servers either have A records at the zone parent servers, or do not need them (if the DNS servers are on other TLDs). A records are required for your hostnames to ensure that other DNS servers can reach your DNS servers. Note that there will be problems if your DNS servers do not have these same A records.
	INFO	NS records at your nameservers	<p>Your NS records at your nameservers are:</p> <pre> ns4.msft.net. [207.46.66.126] [TTL=172800] ns5.msft.net. [65.55.238.126] [TTL=172800] ns1.msft.net. [207.68.160.190] [TTL=172800] ns2.msft.net. [65.54.240.126] [TTL=172800] ns3.msft.net. [213.199.161.77] [TTL=172800] </pre>
	PASS	Open DNS servers	OK. Your DNS servers do not announce that they are open DNS servers. Although there is a slight chance that they really are open DNS servers this is very unlikely. Open DNS servers increase the chances that of cache poisoning, can degrade performance of your DNS, and can cause your DNS servers to be used in an attack (so it is good that your DNS servers do not appear to be open DNS servers).
	PASS	Mismatched glue	OK. The DNS report did not detect any discrepancies between the glue provided by the parent servers and that provided by your authoritative

		DNS servers.
PASS	No NS A records at nameservers	OK. Your nameservers do include corresponding A records when asked your NS records. This ensures that your DNS servers know the A record corresponding to all your NS records.
PASS	All nameservers report identical NS records	OK. The NS records at all your nameservers are identical.
PASS	All nameservers respond	OK. All of your nameservers listed at the parent nameservers respond
PASS	Nameserver name validity	OK. All of the NS records that your nameservers report seem valid (no or partial domain names).
PASS	Number of nameservers	OK. You have 5 nameservers. You must have at least 2 nameservers (RFC2182 section 5 recommends at least 3 nameservers), and preferal no more than 7.
PASS	Lame nameservers	OK. All the nameservers listed at the parent servers answer authoritatively for your domain.
PASS	Missing (stealth) nameservers	OK. All 5 of your nameservers (as reported by your nameservers) are a listed at the parent servers.
PASS	Missing nameservers 2	OK. All of the nameservers listed at the parent nameservers are also listed as NS records at your nameservers.
PASS	No CNAMEs for domain	OK. There are no CNAMEs for msft.net. RFC1912 2.4 and RFC2181 10. state that there should be no CNAMEs if an NS (or any other) record is

		present.
PASS	No NSs with CNAMEs	OK. There are no CNAMEs for your NS records. <u>RFC1912</u> 2.4 and <u>RFC2181</u> 10.3 state that there should be no CNAMEs if an NS (or any other) record is present.
PASS	Nameservers on separate class C's	OK. You have nameservers on different Class C (technically, /24) IP ranges. You must have nameservers at geographically and topologically dispersed locations. <u>RFC2182</u> 3.1 goes into more detail about seconda nameserver location.
PASS	All NS IPs public	OK. All of your NS records appear to use public IPs. If there were any private IPs, they would not be reachable, causing DNS delays.
WARN	TCP Allowed	WARNING: One or more of your DNS servers does not accept TCP connections. Although rarely used, TCP connections are occasionally used instead of UDP connections. When firewalls block the TCP DNS connections, it can cause hard-to-diagnose problems. The problem servers are:  207.68.160.190: Error [No response to TCP packets]. 65.54.240.126: Error [No response to TCP packets]. 213.199.161.77: Error [No response to TCP packets]. 207.46.66.126: Error [No response to TCP packets]. 65.55.238.126: Error [No response to TCP packets].
INFO	Nameservers versions	[For security reasons, this test is limited to members]
PASS	Stealth NS record leakage	Your DNS servers do not leak any stealth NS records (if any) in non-NS requests.
		Your SOA record [TTL=86400] is:  Primary nameserver: ns1.msft.net.

Hostmaster E-mail address: msnhst.microsoft.com.

Serial #: 2007121102

Refresh: 1800

Retry: 900

Expire: 2419200

Default TTL: 3600

INFO	SOA record	OK. All your nameservers agree that your SOA serial number is 2007121102. That means that all your nameservers are using the same data (unless you have different sets of data with the same serial number which would be very bad)! Note that the DNSreport only checks the NS records listed at the parent servers (not any stealth servers).
PASS	NS agreement on SOA Serial #	OK. Your SOA (Start of Authority) record states that your master (primary) name server is: ns1.msft.net.. That server is listed at the parent servers, which is correct.
PASS	SOA MNAME Check	OK. Your SOA (Start of Authority) record states that your DNS contact mail address is: msnhst@microsoft.com. (techie note: we have changed the initial '.' to an '@' for display purposes).
PASS	SOA RNAME Check	OK. Your SOA serial number is: 2007121102. This appears to be in the recommended format of YYYYMMDDnn, where 'nn' is the revision. So this indicates that your DNS was last updated on 11 Dec 2007 (and was revision #2). This number must be incremented every time you make a DNS change.
PASS	SOA Serial Number	OK. Your SOA REFRESH interval is : 1800 seconds. This seems normal (about 3600-7200 seconds is good if not using DNS NOTIFY; RFC1912 recommends a value between 1200 to 43200 seconds (20 minutes to 12 hours)). This value determines how often secondary/slave nameservers check with the master for updates.
PASS	SOA REFRESH value	OK. Your SOA RETRY interval is : 900 seconds. This seems normal (about 3600-7200 seconds is good if not using DNS NOTIFY; RFC1912 recommends a value between 1200 to 43200 seconds (20 minutes to 12 hours)). This value determines how often secondary/slave nameservers check with the master for updates.

SOA

	PASS	SOA RETRY value	120-7200 seconds is good). The retry value is the amount of time your secondary/slave nameservers will wait to contact the master nameserver again if the last attempt failed.
	PASS	SOA EXPIRE value	OK. Your SOA EXPIRE time: 2419200 seconds. This seems normal (about 1209600 to 2419200 seconds (2-4 weeks) is good). RFC1912 suggests 2-4 weeks. This is how long a secondary/slave nameserver will wait before considering its DNS data stale if it can't reach the primary nameserver.
	PASS	SOA MINIMUM TTL value	OK. Your SOA MINIMUM TTL is: 3600 seconds. This seems normal (about 3,600 to 86400 seconds or 1-24 hours is good). RFC2308 suggests a value of 1-3 hours. This value used to determine the default (technically, minimum) TTL (time-to-live) for DNS entries, but now is used for negative caching.
MX	FAIL	MX Category	ERROR: I couldn't find any MX records for msft.net. If you want to receive E-mail on this domain, you should have MX record(s). Without any MX records, mailservers should attempt to deliver mail to the A record for msft.net. I can't continue in a case like this, so I'm assuming you don't receive mail on this domain.
Mail	FAIL	Connect to mail servers	ERROR: I could not find any mailservers for msft.net.
WWW	FAIL	WWW Category	ERROR: I couldn't find any A records for www.msft.net. But I did find a referral to ns1.msft.net. (and maybe others). If you want a website at www.msft.net, you will need an A record for www.msft.net. If you do not want a website at www.msft.net, you can ignore this error.

>>> Last update of whois database: Tue, 8 Nov 2005 02:18:48 EST <<<

NOTICE: The expiration date displayed in this record is the date the registrar's sponsorship of the domain name registration in the registry is currently set to expire. This date does not necessarily reflect the expiration date of the domain name registrant's agreement with the sponsoring registrar. Users may consult the sponsoring registrar's Whois database to view the registrar's reported date of expiration for this registration.

TERMS OF USE: You are not authorized to access or query our Whois database through the use of electronic processes that are high-volume and automated except as reasonably necessary to register domain names or modify existing registrations; the Data in VeriSign Global Registry Services' ("VeriSign") Whois database is provided by VeriSign for Information purposes only, and to assist persons in obtaining information about or related to a domain name registration record. VeriSign does not guarantee its accuracy. By submitting a Whois query, you agree to abide by the following terms of use: You agree that you may use this Data only for lawful purposes and that under no circumstances will you use this Data to: (1) allow, enable, or otherwise support the transmission of mass unsolicited, commercial advertising or solicitations via e-mail, telephone, or facsimile; or (2) enable high volume, automated, electronic processes that apply to VeriSign (or its computer systems). The compilation, repackaging, dissemination or other use of this Data is expressly prohibited without the prior written consent of VeriSign. You agree not to use electronic processes that are automated and high-volume to access or query the Whois database except as reasonably necessary to register domain names or modify existing registrations. VeriSign reserves the right to restrict your access to the Whois database in its sole discretion to ensure operational stability. VeriSign may restrict or terminate your access to the Whois database for failure to abide by these terms of use. VeriSign reserves the right to modify these terms at any time.

The Registry database contains ONLY .COM, .NET, .EDU domains and Registrars.

Google

Lookup microsoft.com in simple text at <http://www.lppages.com/simple>  
or in xml format at <http://www.lppages.com/xml>

IP Address Lookup Form

IP Address: or Host Name: Lookup Subscription Key: 

8 more Lookups allowed today.

[Check your Subscription status here.](#)

Choose the lookup fields you want to see. Using our simple text or xml interface, you can specify with the &get= parameter any available field name, in any sequence. For example [http://www.ippages.com/simple/?host=yahoo.com&get=ip,country,state\\_name,city,timezone](http://www.ippages.com/simple/?host=yahoo.com&get=ip,country,state_name,city,timezone) will get you a comma-delimited list of only the 5 lookup fields specified.

Multiple data sources are used for some lookup fields. You will see **(verified)** whenever and wherever we can get the same result from more than 1 data source. In some instances, though, this will only be available to subscribers.

IP Address Lookup file to upload:

[Browse...](#)Lookup Subscription Key: Lookup data fields to retrieve: 

- For a complete list of available Lookup data fields, do your file upload from [here](#).

[Upload Lookup File](#)

Need to purchase additional IP Address Lookups? Or get access to all returned data fields? Or need more consistent, faster lookup results?

# DNS Report for microsoft.com

Generated by [www.DNSReport.com](http://www.DNSReport.com) at 16:12:04 GMT on 08 Nov 2005.

Category	Status	Test Name	Information
Parent	PASS	Missing Direct Parent check	OK. Your direct parent zone exists, which is good. Some domains (usually third or fourth level domains, such as example.co.us) do not have a direct parent zone ('co.us' in this example), which is legal but can cause confusion.
	INFO	NS records at parent servers	<p>Your NS records at the parent servers are:</p> <pre> ns1.msft.net. [207.46.245.230] [TTL=172800] [US] ns2.msft.net. [64.4.25.30] [TTL=172800] [US] ns3.msft.net. [213.199.144.151] [TTL=172800] [UK] ns4.msft.net. [207.46.66.75] [TTL=172800] [US] ns5.msft.net. [207.46.138.20] [TTL=172800] [US] </pre> <p>[These were obtained from h.gtld-servers.net]</p>
	PASS	Parent nameservers have your nameservers listed	OK. When someone uses DNS to look up your domain, the first step (if it doesn't already know about your domain) is to go to the parent servers. If you aren't listed there, you can't be found. But you are listed there.
	PASS	Glue at parent nameservers	OK. The parent servers have glue for your nameservers. That means they send out the IP address of your nameservers, as well as their host names.
	PASS	DNS servers have A records	OK. All your DNS servers either have A records at the zone parent servers, or do not need them (if the DNS servers are on other TLDs). A records are required for your hostnames to ensure that other DNS servers can reach your DNS servers. Note that there will be problems if your DNS servers do not have these same A records.
	INFO	NS records at your nameservers	<p>Your NS records at your nameservers are:</p> <pre> ns1.msft.net. [207.46.245.230] [TTL=172800] ns2.msft.net. [64.4.25.30] [TTL=172800] ns3.msft.net. [213.199.144.151] [TTL=172800] ns4.msft.net. [207.46.66.75] [TTL=172800] ns5.msft.net. [207.46.138.20] [TTL=172800] </pre>
	PASS	Mismatched glue	OK. The DNS report did not detect any discrepancies between the glue provided by the parent servers and that provided by your authoritative DNS servers.
	PASS	No NS A records at nameservers	OK. Your nameservers do include corresponding A records when asked for your NS records. This ensures that your DNS servers know the A records corresponding to all your NS records.

NS

PASS	All nameservers report identical NS records	OK. The NS records at all your nameservers are identical.
PASS	All nameservers respond	OK. All of your nameservers listed at the parent nameservers responded.
PASS	Nameserver name validity	OK. All of the NS records that your nameservers report seem valid (no IPs or partial domain names).
PASS	Number of nameservers	OK. You have 5 nameservers. You must have at least 2 nameservers (RFC2182 section 5 recommends at least 3 nameservers), and preferably no more than 7.
PASS	Lame nameservers	OK. All the nameservers listed at the parent servers answer authoritatively for your domain.
PASS	Missing (stealth) nameservers	OK. All 5 of your nameservers (as reported by your nameservers) are also listed at the parent servers.
PASS	Missing nameservers 2	OK. All of the nameservers listed at the parent nameservers are also listed as NS records at your nameservers.
PASS	No CNAMEs for domain	OK. There are no CNAMEs for microsoft.com. RFC1912 2.4 and RFC2181 10.3 state that there should be no CNAMEs if an NS (or any other) record is present.
PASS	No NSs with CNAMEs	OK. There are no CNAMEs for your NS records. RFC1912 2.4 and RFC2181 10.3 state that there should be no CNAMEs if an NS (or any other) record is present.
PASS	Nameservers on separate class C's	OK. You have nameservers on different Class C (technically, /24) IP ranges. You must have nameservers at geographically and topologically dispersed locations. RFC2182 3.1 goes into more detail about secondary nameserver location.
PASS	All NS IPs public	OK. All of your NS records appear to use public IPs. If there were any private IPs, they would not be reachable, causing DNS delays.
INFO	Nameservers versions	<p>Your nameservers have the following versions:</p> <p>207.46.245.230: No version info available (CHAOS not implemented).</p> <p>64.4.25.30: No version info available (CHAOS not implemented).</p> <p>213.199.144.151: No version info available (CHAOS not implemented).</p> <p>207.46.66.75: No version info available (CHAOS not</p>

		implemented). 207.46.138.20: No version info available (CHAOS not implemented).
	PASS	Stealth NS record leakage Your DNS servers do not leak any stealth NS records (if any) in non-NS requests.
SOA	INFO	SOA record Your SOA record [TTL=3600] is:  Primary nameserver: dns.cp.msft.net. Hostmaster E-mail address: msnhst.microsoft.com. Serial #: 2005110701 Refresh: 300 Retry: 600 Expire: 2419200 Default TTL: 3600
	PASS	NS agreement on SOA serial # OK. All your nameservers agree that your SOA serial number is 2005110701. That means that all your nameservers are using the same data (unless you have different sets of data with the same serial number, which would be very bad)! Note that the DNS Report only checks the NS records listed at the parent servers (not any stealth servers).
	WARN	SOA MNAME Check WARNING: Your SOA (Start of Authority) record states that your <b>master</b> (primary) name server is: <b>dns.cp.msft.net.</b> However, that server is not listed at the parent servers as one of your NS records! This is probably legal, but you should be sure that you know what you are doing.
	PASS	SOA RNAME Check OK. Your SOA (Start of Authority) record states that your DNS contact E-mail address is: <b>msnhst@microsoft.com.</b> (techie note: we have changed the initial '.' to an '@' for display purposes).
	PASS	SOA Serial Number OK. Your SOA serial number is: <b>2005110701</b> . This appears to be in the recommended format of YYYYMMDDnn, where 'nn' is the revision. For example, if you are making the 3rd change on 02 May 2000, you would use 2000050203. This number <b>must</b> be incremented every time you make a DNS change.
	WARN	SOA REFRESH value WARNING: Your SOA REFRESH interval is : <b>300 seconds</b> . This seems low. You should consider increasing this value to about 3600-7200 seconds. RFC1912 2.2 recommends a value between 1200 to 43200 seconds (20 minutes to 12 hours). A value that is too low will unnecessarily increase Internet traffic.
	PASS	SOA RETRY OK. Your SOA RETRY interval is : <b>600 seconds</b> . This seems normal (about 120-7200 seconds is good). The retry value is the amount of time your secondary/slave

	value	nameservers will wait to contact the master nameserver again if the last attempt failed.
PASS	SOA EXPIRE value	OK. Your SOA EXPIRE time: <b>2419200 seconds</b> . This seems normal (about 1209600 to 2419200 seconds (2-4 weeks) is good). <a href="#">RFC1912</a> recommends 2-4 weeks. This is how long a secondary/slave nameserver will wait before considering its DNS data stale if it can't reach the primary nameserver.
PASS	SOA MINIMUM TTL value	OK. Your SOA MINIMUM TTL is: <b>3600 seconds</b> . This seems normal (about 3,600 to 86400 seconds or 1-24 hours is good). <a href="#">RFC2308</a> suggests a value of 1-3 hours. This value used to determine the default (technically, minimum) TTL (time-to-live) for DNS entries, but now is used for negative caching.

MX	INFO	MX Record	Your 3 MX records are: 10 mailc.microsoft.com. [TTL=3600] IP=205.248.102.79 [TTL=3600] [US] IP=205.248.102.78 [TTL=3600] [US] 10 maila.microsoft.com. [TTL=3600] IP=131.107.3.125 [TTL=3600] [US] IP=131.107.3.124 [TTL=3600] [US] 10 mailb.microsoft.com. [TTL=3600] IP=131.107.3.123 [TTL=3600] [US] IP=205.248.102.77 [TTL=3600] [US]
	PASS	Invalid characters	OK. All of your MX records appear to use valid hostnames, without any invalid characters.
	PASS	All MX IPs public	OK. All of your MX records appear to use public IPs. If there were any private IPs, they would not be reachable, causing slight mail delays, extra resource usage, and possibly bounced mail.
	PASS	MX records are not CNAMEs	OK. Looking up your MX record did not just return a CNAME. If an MX record query returns a CNAME, extra processing is required, and some mail servers may not be able to handle it.
	PASS	MX A lookups have no CNAMEs	OK. There appear to be no CNAMEs returned for A records lookups from your MX records (CNAMEs are prohibited in MX records, according to <a href="#">RFC974</a> , <a href="#">RFC1034</a> 3.6.2, <a href="#">RFC1912</a> 2.4, and <a href="#">RFC2181</a> 10.3).
	PASS	MX is host name, not IP	OK. All of your MX records are host names (as opposed to IP addresses, which are not allowed in MX records).
	PASS	Multiple MX records	OK. You have multiple MX records. This means that if one is down or unreachable, the other(s) will be able to accept mail for you.
	PASS	Differing MX-A	OK. I did not detect differing IPs for your MX records (this would happen if your DNS servers return different IPs than the DNS servers that are

	records	authoritative for the hostname in your MX records).
PASS	Duplicate MX records	OK. You do not have any duplicate MX records (pointing to the same IP). Although technically valid, duplicate MX records can cause a lot of confusion, and waste resources.
PASS	Reverse DNS entries for MX records	OK. The IPs of all of your mail server(s) have reverse DNS (PTR) entries. RFC1912 2.1 says you should have a reverse DNS for all your mail servers. It is strongly urged that you have them, as many mailservers will not accept mail from mailservers with no reverse DNS entry. Note that this information is <i>cached</i> , so if you changed it recently, it will not be reflected here (see the <a href="http://www.DNSstuff.com">www.DNSstuff.com</a> Reverse DNS Tool for the current data). The reverse DNS entries are:  78.102.248.205.in-addr.arpa mail5.microsoft.com. [TTL=2460] 124.3.107.131.in-addr.arpa mail2.microsoft.com. [TTL=2460] 77.102.248.205.in-addr.arpa mailb.microsoft.com. [TTL=2460]
PASS	Connect to mail servers	OK: I was able to connect to all of your mailservers.
PASS	Mail server host name in greeting	OK: All of your mailservers have their host name in the greeting:  mailb.microsoft.com: 220 IGS-IMC-01.northamerica.corp.microsoft.com <Inbound SMTP Virtual Server> Tue, 8 Nov 2005 08:12:10 -0800 mailc.microsoft.com: 220 IGS-IMC-02.northamerica.corp.microsoft.com <Inbound SMTP Virtual Server> Tue, 8 Nov 2005 08:12:10 -0800 maila.microsoft.com: 220 IGR-IMC-02.redmond.corp.microsoft.com <Inbound SMTP Virtual Server> Tue, 8 Nov 2005 08:12:11 -0800
PASS	Acceptance of NULL < sender	OK: All of your mailservers accept mail from "<". You are required (RFC115.2.9) to receive this type of mail (which includes reject/bounce messages and return receipts).
PASS	Acceptance of postmaster address	OK: All of your mailservers accept mail to postmaster@microsoft.com (as required by RFC822 6.3, RFC1123 5.2.7, and RFC2821 4.5.1).
PASS	Acceptance of abuse address	OK: All of your mailservers accept mail to abuse@microsoft.com.
INFO	Acceptance of domain	WARNING: One or more of your mailservers does not accept mail in the domain literal format (user@[0.0.0.0]). Mailservers are technically required RFC1123 5.2.17 to accept mail to domain literals for any of its IP addresses. If accepting domain literals can make it more difficult to test your mailserver, as can prevent you from receiving E-mail from people reporting problems with your mailserver. However, it is unlikely that any problems will occur if the domain literals are not accepted (mailservers at many common large domains have this problem).

Mail

	literals	<p>mailb.microsoft.com's postmaster@[205.248.102.77] response:          &gt;&gt;&gt; RCPT TO:&lt;postmaster@[205.248.102.77]&gt;          &lt;&lt;&lt; 550 5.7.1 Unable to relay for postmaster@[205.248.102.77]          mailc.microsoft.com's postmaster@[205.248.102.78] response:          &gt;&gt;&gt; RCPT TO:&lt;postmaster@[205.248.102.78]&gt;          &lt;&lt;&lt; 550 5.7.1 Unable to relay for postmaster@[205.248.102.78]          maila.microsoft.com's postmaster@[131.107.3.124] response:          &gt;&gt;&gt; RCPT TO:&lt;postmaster@[131.107.3.124]&gt;          &lt;&lt;&lt; 550 5.7.1 Unable to relay for postmaster@[131.107.3.124]</p>	
	PASS	Open relay test	<p>OK: All of your mailservers appear to be closed to relaying. This is <i>not</i> a thorough check, you can get a thorough one <a href="#">here</a>.          mailb.microsoft.com OK: 550 5.7.1 Unable to relay for Not.abuse.see.www.DNSreport.com.from.IP.12.109.34.158@DNSreport.com          mailc.microsoft.com OK: 550 5.7.1 Unable to relay for Not.abuse.see.www.DNSreport.com.from.IP.12.109.34.158@DNSreport.com          maila.microsoft.com OK: 550 5.7.1 Unable to relay for Not.abuse.see.www.DNSreport.com.from.IP.12.109.34.158@DNSreport.com</p>
	PASS	SPF record	<p>You have an <u>SPF record</u>. This is very good, as it will help prevent spammers from abusing your domain. Your SPF record is:          "v=spf1 mx redirect=_spf.microsoft.com" [TTL=3600]</p>
<b>WWW</b> 	INFO	WWW Record	<p>Your www.microsoft.com A record is:          www.microsoft.com. CNAME toggle.www.ms.akadns.net.</p>
	PASS	All WWW IPs public	<p>OK. All of your WWW IPs appear to be public IPs. If there were IPs, they would not be reachable, causing problems reaching you</p>
	WARN	CNAME Lookup	<p>WARNING. Your web site (www.microsoft.com) has a CNAME pointing to toggle.www.ms.akadns.net.. That by itself is confusingly acceptable. However, the CNAME record in this case causes an extra lookup, which will slightly delay visitors to your website, and use bandwidth.</p>

**Legend:**

- Rows with a FAIL indicate a problem that in most cases really should be fixed.
- Rows with a WARN indicate a possible minor problem, which often is not worth pursuing.
- Note that all information is accessed in real-time (except where noted), so this is the freshest information about your domain.

Lookup

95 more Lookups allowed today.

Check your Subscription status [here](#).

Choose the lookup fields you want to see. Using our simple text or xml interface, you can specify with the &get= parameter any available field name, in any sequence. For example [http://www.showmyip.com/simple/?host=yahoo.com&get=ip,country,state\\_name,city,timezone](http://www.showmyip.com/simple/?host=yahoo.com&get=ip,country,state_name,city,timezone) will get you a comma-delimited list of only the 5 lookup fields specified.

Multiple data sources are used for some lookup fields. You will see **(verified)** whenever and wherever we can get the same result from more than 1 data source. In some instances, though, this will only be available to subscribers.

IP Address Lookup file to upload:

# DNS Report for msn.com

Generated by [www.DNSreport.com](http://www.DNSreport.com) at 20:42:42 GMT on 11 Jan 2006.

Category	Status	Test Name	Information
Parent	PASS	Missing Direct Parent check	OK. Your direct parent zone exists, which is good. Some domains (usually third or fourth level domains, such as example.co.us) do not have a direct parent zone ('co.us' in this example), which is legal but can cause confusion.
	INFO	NS records at parent servers	Your NS records at the parent servers are: ns1.msft.net. [207.46.245.230] [TTL=172800] [US] ns2.msft.net. [64.4.25.30] [TTL=172800] [US] ns3.msft.net. [213.199.144.151] [TTL=172800] [UK] ns4.msft.net. [207.46.66.75] [TTL=172800] [US] ns5.msft.net. [207.46.138.20] [TTL=172800] [US] [These were obtained from g.gtld-servers.net]
	PASS	Parent nameservers have your nameservers listed	OK. When someone uses DNS to look up your domain, the first step (if it doesn't already know about your domain) is to go to the parent servers. If you aren't listed there, you can't be found. But you are listed there.
	PASS	Glue at parent nameservers	OK. The parent servers have glue for your nameservers. That means they send out the IP address of your nameservers, as well as their host names.
	PASS	DNS servers have A records	OK. All your DNS servers either have A records at the zone parent servers, or do not need them (if the DNS servers are on other TLDs). A records are required for your hostnames to ensure that other DNS servers can reach your DNS servers. Note that there will be problems if your DNS servers do not have these same A records.
NS	INFO	NS records at your	Your NS records at your nameservers are: ns2.msft.net. [64.4.25.30] [TTL=172800]

	nameservers	ns3.msft.net. [213.199.144.151] [TTL=172800] ns4.msft.net. [207.46.66.75] [TTL=172800] ns5.msft.net. [207.46.138.20] [TTL=172800] ns1.msft.net. [207.46.245.230] [TTL=172800]
PASS	Mismatched glue	OK. The DNS report did not detect any discrepancies between the glue provided by the parent servers and that provided by your authoritative DNS servers.
PASS	No NS A records at nameservers	OK. Your nameservers do include corresponding A records when asked for your NS records. This ensures that your DNS servers know the A records corresponding to all your NS records.
PASS	All nameservers report identical NS records	OK. The NS records at all your nameservers are identical.
PASS	All nameservers respond	OK. All of your nameservers listed at the parent nameservers responded.
PASS	Nameserver name validity	OK. All of the NS records that your nameservers report seem valid (no IPs or partial domain names).
PASS	Number of nameservers	OK. You have 5 nameservers. You must have at least 2 nameservers ( <u>RFC2182</u> section 5 recommends at least 3 nameservers), and preferably no more than 7.
PASS	Lame nameservers	OK. All the nameservers listed at the parent servers answer authoritatively for your domain.
PASS	Missing (stealth) nameservers	OK. All 5 of your nameservers (as reported by your nameservers) are also listed at the parent servers.
PASS	Missing nameservers 2	OK. All of the nameservers listed at the parent nameservers are also listed as NS records at your nameservers.
PASS	No CNAMEs for domain	OK. There are no CNAMEs for msn.com. <u>RFC1912</u> 2.4 and <u>RFC2181</u> 10.3 state that there should be no CNAMEs if an NS (or any other) record is present.

	PASS	No NSs with CNAMEs	OK. There are no CNAMEs for your NS records. <u>RFC1912</u> 2.4 and <u>RFC2181</u> 10.3 state that there should be no CNAMEs if an NS (or any other) record is present.
	PASS	Nameservers on separate class C's	OK. You have nameservers on different Class C (technically, /24) IP ranges. You must have nameservers at geographically and topologically dispersed locations. <u>RFC2182</u> 3.1 goes into more detail about secondary nameserver location.
	PASS	All NS IPs public	OK. All of your NS records appear to use public IPs. If there were any private IPs, they would not be reachable, causing DNS delays.
	INFO	Nameservers versions	Your nameservers have the following versions:  207.46.245.230: No version info available (CHAOS not implemented). 64.4.25.30: No version info available (CHAOS not implemented). 213.199.144.151: No version info available (CHAOS not implemented). 207.46.66.75: No version info available (CHAOS not implemented). 207.46.138.20: No version info available (CHAOS not implemented).
	PASS	Stealth NS record leakage	Your DNS servers do not leak any stealth NS records (if any) in non-NS requests.
SOA	INFO	SOA record	Your SOA record [TTL=86400] is: Primary nameserver: dns.cp.msft.net. Hostmaster E-mail address: msnhst.microsoft.com. Serial #: 2006010504 Refresh: 1800 Retry: 900 Expire: 2419200 Default TTL: 900
	PASS	NS agreement on SOA serial #	OK. All your nameservers agree that your SOA serial number is 2006010504. That means that all your nameservers are using the same data (unless you have different sets of data with the same serial number, which would be very bad)! Note that the DNS Report only checks the NS records listed at the parent servers (not any stealth servers).
	WARN	SOA	WARNING: Your SOA (Start of Authority)

	MNAME Check	record states that your <b>master</b> (primary) name server is: <b>dns.cp.msft.net.</b> However, that server is not listed at the parent servers as one of your NS records! This is probably legal, but you should be sure that you know what you are doing.
PASS	SOA RNAME Check	OK. Your SOA (Start of Authority) record states that your DNS contact E-mail address is: <b>msnhst@microsoft.com.</b> (techie note: we have changed the initial '.' to an '@' for display purposes).
PASS	SOA Serial Number	OK. Your SOA serial number is: <b>2006010504.</b> This appears to be in the recommended format of YYYYMMDDnn, where 'nn' is the revision. For example, if you are making the 3rd change on 02 May 2000, you would use 2000050203. This number <b>must</b> be incremented every time you make a DNS change.
PASS	SOA REFRESH value	OK. Your SOA REFRESH interval is : <b>1800 seconds.</b> This seems normal (about 3600-7200 seconds is good if not using DNS NOTIFY; <u>RFC1912</u> 2.2 recommends a value between 1200 to 43200 seconds (20 minutes to 12 hours)). This value determines how often secondary/slave nameservers check with the master for updates.
PASS	SOA RETRY value	OK. Your SOA RETRY interval is : <b>900 seconds.</b> This seems normal (about 120-7200 seconds is good). The retry value is the amount of time your secondary/slave nameservers will wait to contact the master nameserver again if the last attempt failed.
PASS	SOA EXPIRE value	OK. Your SOA EXPIRE time: <b>2419200 seconds.</b> This seems normal (about 1209600 to 2419200 seconds (2-4 weeks) is good). <u>RFC1912</u> recommends 2-4 weeks. This is how long a secondary/slave nameserver will wait before considering its DNS data stale if it can't reach the primary nameserver.
PASS	SOA MINIMUM TTL value	OK. Your SOA MINIMUM TTL is: <b>900 seconds.</b> This seems normal (about 3,600 to 86400 seconds or 1-24 hours is good). <u>RFC2308</u> suggests a value of 1-3 hours. This value used to determine the default (technically, minimum) TTL (time-to-live) for DNS entries, but now is used for negative

			caching.
MX	INFO	MX Record	<p>Your 4 MX records are:</p> <p>5 mx4.hotmail.com. [TTL=900] IP=65.54.245.104 [TTL=3600] [US]  IP=65.54.190.179 [TTL=3600] [US]  IP=65.54.244.104 [TTL=3600] [US]  IP=65.54.244.232 [TTL=3600] [US]  5 mx1.hotmail.com. [TTL=900] IP=65.54.244.8 [TTL=3600] [US]  IP=64.4.50.50 [TTL=3600] [US]  IP=65.54.245.8 [TTL=3600] [US]  IP=65.54.244.136 [TTL=3600] [US]  5 mx2.hotmail.com. [TTL=900] IP=65.54.245.40 [TTL=3600] [US]  IP=65.54.244.168 [TTL=3600] [US]  IP=65.54.244.40 [TTL=3600] [US]  IP=65.54.190.50 [TTL=3600] [US]  5 mx3.hotmail.com. [TTL=900] IP=65.54.244.200 [TTL=3600] [US]  IP=64.4.50.179 [TTL=3600] [US]  IP=65.54.244.72 [TTL=3600] [US]  IP=65.54.245.72 [TTL=3600] [US]</p>
	PASS	Invalid characters	OK. All of your MX records appear to use valid hostnames, without any invalid characters.
	PASS	All MX IPs public	OK. All of your MX records appear to use public IPs. If there were any private IPs, they would not be reachable, causing slight mail delays, extra resource usage, and possibly bounced mail.
	PASS	MX records are not CNAMEs	OK. Looking up your MX record did not just return a CNAME. If an MX record query returns a CNAME, extra processing is required, and some mail servers may not be able to handle it.
	PASS	MX A lookups have no CNAMEs	OK. There appear to be no CNAMEs returned for A records lookups from your MX records (CNAMEs are prohibited in MX records, according to <a href="#">RFC974</a> , <a href="#">RFC1034</a> 3.6.2, <a href="#">RFC1912</a> 2.4, and <a href="#">RFC2181</a> 10.3).
	PASS	MX is host name, not IP	OK. All of your MX records are host names (as opposed to IP addresses, which are not allowed in MX records).
	PASS	Multiple MX records	OK. You have multiple MX records. This means that if one is down or unreachable, the other(s) will be able to accept mail for you.

	PASS	Differing MX-A records	OK. I did not detect differing IPs for your MX records (this would happen if your DNS servers return different IPs than the DNS servers that are authoritative for the hostname in your MX records).
	PASS	Duplicate MX records	OK. You do not have any duplicate MX records (pointing to the same IP). Although technically valid, duplicate MX records can cause a lot of confusion, and waste resources.
	PASS	Reverse DNS entries for MX records	OK. The IPs of all of your mail server(s) have reverse DNS (PTR) entries. <u>RFC1912 2.1</u> says you should have a reverse DNS for all your mail servers. It is strongly urged that you have them, as many mailservers will not accept mail from mailservers with no reverse DNS entry. Note that this information is <i>cached</i> , so if you changed it recently, it will not be reflected here (see the <u>www.DNSstuff.com Reverse DNS Tool</u> for the current data). The reverse DNS entries are: 232.244.54.65.in-addr.arpa mx4.hotmail.com. [TTL=2455] 136.244.54.65.in-addr.arpa mail.hotmail.com. [TTL=2698] 50.190.54.65.in-addr.arpa mail.hotmail.com. [TTL=2455] 72.245.54.65.in-addr.arpa bay0-mc11-f.bay0.hotmail.com. [TTL=3325]
Mail *	FAIL	Connect to mail servers	ERROR: I could not complete a connection to one or more of your mailservers: mx2.hotmail.com: Timed out [Last data sent: [Did not connect]]
Mail *	WARN	Mail server host name in greeting	WARNING: One or more of your mailservers is claiming to be a host other than what it really is (the SMTP greeting should be a 3-digit code, followed by a space or a dash, then the host name). This probably won't cause any harm, but is a technical violation of <u>RFC821 4.3</u> (and <u>RFC2821 4.3.1</u> ). Note that the hostname given in the SMTP greeting should have an A record pointing back to the same server.

mx4.hotmail.com claims to be host bay0-

		is at 65.54.244.143, not 65.54.244.136]. mx3.hotmail.com claims to be host bay0-mc11-f2.bay0.hotmail.com [but that host is at 65.54.245.74, not 65.54.245.72].
<b>PASS</b>	Acceptance of NULL < sender	OK: All of your mailservers accept mail from "<". You are required ( <a href="#">RFC1123 5.2.9</a> ) to receive this type of mail (which includes reject/bounce messages and return receipts).
	Acceptance of postmaster address	ERROR: One or more of your mailservers does not accept mail to postmaster@msn.com. Mailservers are required ( <a href="#">RFC822 6.3</a> , <a href="#">RFC1123 5.2.7</a> , and <a href="#">RFC2821 4.5.1</a> ) to accept mail to postmaster. mx4.hotmail.com's postmaster response: >>> RCPT TO:<postmaster@msn.com> <<< 550 Requested action not taken: mailbox unavailable mx1.hotmail.com's postmaster response: >>> RCPT TO:<postmaster@msn.com> <<< 550 Requested action not taken: mailbox unavailable mx3.hotmail.com's postmaster response: >>> RCPT TO:<postmaster@msn.com> <<< 550 Requested action not taken: mailbox unavailable
<b>PASS</b>	Acceptance of abuse address	OK: All of your mailservers accept mail to abuse@msn.com.
<b>INFO</b>	Acceptance of domain literals	WARNING: One or more of your mailservers does not accept mail in the domain literal format (user@[0.0.0.0]). Mailservers are technically required <a href="#">RFC1123 5.2.17</a> to accept mail to domain literals for any of its IP addresses. Not accepting domain literals can make it more difficult to test your mailserver, and can prevent you from receiving E-mail from people reporting problems with your mailserver. However, it is unlikely that any problems will occur if the domain literals are not accepted (mailservers at many common large domains have this problem). mx1.hotmail.com's

		<<< 501 Invalid Address mx3.hotmail.com's postmaster@[65.54.245.72] response: >>> RCPT TO:<postmaster@[65.54.245.72]> <<< 501 Invalid Address
PASS	Open relay test	OK: All of your mailservers appear to be closed to relaying. This is <i>not</i> a thorough check, you can get a thorough one <u>here</u> . mx1.hotmail.com OK: 550 Requested action not taken: mailbox unavailable mx4.hotmail.com OK: 550 Requested action not taken: mailbox unavailable mx3.hotmail.com OK: 550 Requested action not taken: mailbox unavailable
PASS	SPF record	You have an <u>SPF record</u> . This is very good, as it will help prevent spammers from abusing your domain. Your SPF record is: "v=spf1 include:spf-a.hotmail.com include:spf-b.hotmail.com include:spf-c.hotmail.com include:spf-d.hotmail.com -all" [TTL=900]

WWW  	INFO	WWW Record	Your www.msn.com A record is: www.msn.com. CNAME www.msn.com.nsadc.net. [TTL=900]
	PASS	All WWW IPs public	OK. All of your WWW IPs appear to be public IPs. If there were any private IPs, they would not be reachable, causing problems reaching your web site.
	WARN	CNAME Lookup	WARNING. Your web site (www.msn.com) has a CNAME record pointing to www.msn.com.nsadc.net.. That by itself is confusing, but acceptable. However, the CNAME record in this case causes an extra DNS lookup, which will slightly delay visitors to your website, and use extra bandwidth.

TIME zone?

Desiree and I did exchange e-mails  
 (my co-worker at McClure)

what does law10 mean? Is this the trace file?

Is this why the phone wiring on the  
 side of my home was installed different  
 then it should have been?

Is there a file open at the DA's? FBI?  
 CIA?

Does this have something to do with the  
 time and time zones?

What did I cut off of the side of my  
 house at the phone box?

Page 48 of 48

need file date.

why?

where does the other half of the email go
